Erläuterungen zum hydrologischen Jahrbuch 2015 - Grundwasserstand

Zur Ermittlung der Grundwasserstände und der Grundwassertemperaturen dient das seit 1976 bestehende kantonale Grundwasser-Beobachtungsnetz. Für das 'Hydrologische Jahrbuch 2015 – Grundwasserstand' wertet das AUE 85 Messstationen aus (davon 5 von den IWB und 1 vom Bundesamt für Umwelt).

Die ersten drei Seiten des Jahrbuchs zeigen eine Übersichtskarte der Messstellen, sowie die Messstellenliste mit den Beobachtungsjahren der einzelnen Messstellen. Danach folgen die Messresultate der Grundwasserstände im Jahr 2015.

Die gesamte Zeitreihe oder Teile der Messwerte können im Excel- oder txt-Format kostenlos beim AUE bestellt werden. Messwerte innerhalb der Grundwasserschutzzone S2 werden nur mit Bewilligung der IWB herausgegeben.

Hinweise zu den Messresultaten Grundwasserstand

Auf den Datenblättern 'Grundwasserpegel' sind die Grundwasserstände als Tages-, Monats- und Jahresmittel in Metern über Meer dargestellt.
Die monatlichen und jährlichen Extremwerte sind jeweils mit dem Datum ihres Ereignisses versehen. Die Amplituden entsprechen der Differenz zwischen dem grössten (= Spitze) und dem kleinsten Tagesmittel pro Monat bzw. Jahr.
Die grössten und kleinsten Werte einer Rubrik werden jeweils mit '+' bzw. '-' gekennzeichnet.

Die obere Graphik zeigt die Ganglinie der Tagesmittel, die Dauerlinie der Tagesmittel und den Jahresmittelwert.

In der Perioden-Tabelle sind statistische Angaben zur gesamten Messperiode aufgeführt: Monatsmittel, Monats-Spitze bzw. Monats-Minimum, sowie die Monats-Amplitude.

Schliesslich sind der langjährige Verlauf der Monatsmittel, der Jahresmittel sowie die Jahresextremwerte (+/-) graphisch dargestellt. Diese Graphiken umfassen maximal 12 Jahre.
Als Pfeil am Rand sind die langjährigen Periodenmittel der gesamten Messperiode dargestellt.

Bemerkungen zum hydrologischen Jahrbuch 2015 - Grundwasserstand

Im 2014 und 2015 wurden die Pegelbezugspunkte von 74 AUE-Grundwassermessstellen durch ein Vermessungsbüro neu eingemessen. Bei 64 von 74 Messstellen betrug die Abweichung maximal 5 cm gegenüber den bisher verwendeten Pegelbezugspunkten (= Abstichkoten). Bei diesen 64 Messstellen wurden die Pegelbezugspunkte ab 01.01.2015 angepasst.

Bei den restlichen10 Messstellen, bei denen die Abweichung mehr als 5 cm betrug und eine Rückverfolgung des effektiven Pegelbezugspunkts anhand alter Unterlagen möglich war (bei 8 von 10 Messstellen), wurden die Ganglinien so weit als vertretbar zurück korrigiert. Bei den übrigen 2 Messstellen wurde der Pegelbezugspunkt erst ab 01.01.2015 angepasst. Im hydrologischen Jahrbuch 2015 sind die betroffenen 10 Messstellen mit einer Anmerkung zur Pegelkorrektur gekennzeichnet.
